DRAIN GRATING & GREASE TRAP

Choking of the kitchen drains is a regular problem if the grease and food particles are not arrested. This is the area where bacterial growth is the maximum and chances of contamination to food from this is high. The bacterial growth also results into bad odour in the kitchen.

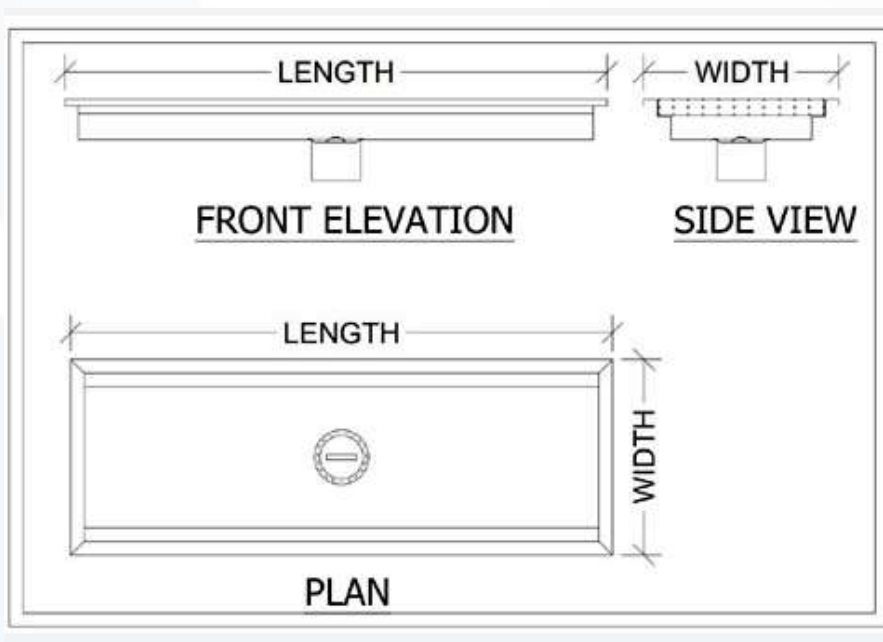

STAR OPUS range of Grease Trap and Drain Gratings provide the right solution for this problem. The water from the Sink unit/range to be drained into the drain trough, through a perforated trough so that the particles are arrested, the drain grating fitted on the top is at the floor level and supported by angular structure for strength. While cleaning just pull up the grating, remove the perforated trough and remove the particles. The waste water with the grease travels to a Grease Trap where the grease and any food particles are arrested and water without the grease and particles is allowed in to the main drain. This eliminates the chances of choking in the drain. The removal of the perforated troughs or the grease trap is very easy for the person doing the cleaning job and hygienic.

Parts Of Kitchen Drain

PRODUCT FEATURES

- Grating constructed out of 25mm x 25mm 304 grade stainless steel square pipes.
- Angular frame structure to support the gratings.
- Perforated baskets with handles to trap any food particles falling into the drain.
- Drain Trough constructed out of 1mm thick 304 grade stainless steel sheet, to ensure there is no seepage of the drain water.
- Flange to connect to the drain pipe.
- All TIG welded for exposed areas & polished to No.4 Finish.

OPTIONAL ACCESSORIES

- Anti skid gratings.
- Ask us for Customization of your Requirement.
